

FIG. 14. (color online) The measured energy spectra of the atmospheric ν_e and ν_μ fluxes by SK, shown with measurements by other experiments, Frejus [39], AMANDA-II [40, 41], IceCube [42–45], and ANTARES [75]. The phrase “forward folding” used by IceCube and AMANDA-II is synonymous with forward-fitting. The HKKM11 flux model predictions for the Kamioka site are also shown in solid (with oscillation) and dashed (without oscillation) lines. The error bars on the SK measurement include all statistical and systematic uncertainties.
